Press release

WebTech Wireless Announces the Launch of new Wireless Transportation Services Including Schedule Adherence

2004-10-01

Trucking and Transportation organizations offered expanded ability to enhance their productivity with a range of new services offered by WebTech Wireless

Burnaby, BC - September 30, 2004 - WebTech Wireless (TSX-V:WEW) today announced the release of Quadrant 5.0 wireless fleet management services for Transportation fleet operations. WebTech's latest release includes new and enhanced services, such as Route Schedule Adherence, to help trucking and transportation companies improve the quality of their service and save significant dollars in operating costs.

"In an increasingly competitive environment, trucking companies are looking for new and innovative ways of streamlining their practices to improve their quality of service, productivity and profitability," says Anwar Sukkarie, President and CEO of WebTech Wireless. "Our new Quadrant 5.0 release illustrates WebTech's continued dedication to develop and deliver powerful tools to the growing transportation market to help them excel in service and bottom line results."

Most noteworthy of the new services is Route Schedule Adherence, which allows Transportation organizations to track how well vehicles adhere to planned schedules. Route schedules built using a Transportation company's in-house planning system are easily uploaded to WebTech's Quadrant Server. Once completed, automatic alerts are generated whenever vehicles deviate from plan. Notifications such as "Behind-Schedule", or "Stopped-Too-Long" are sent via email or cell phone.

"Our schedule adherence functionality will help us capture even greater market share in the growing AVL market and is a critical component in any trucking or transportation organization," commented Lindsay Ryerson, Vice-President Sales and Marketing, WebTech Wireless. "The ease of integration with a customer's current routing and scheduling systems, and timely notifications provides key opportunities for trucking organizations to improve their on-time performance and reduce costs by evaluating best travel routes at any time of the day."

Other key services and enhancements include:

- **Improved Driver Log functionality** - support for checking DOT compliance remotely at the vehicle MDT, as well as via the WebTech Quadrant Server.
- **New Reports**, including:
 - Summary Activity Report
 - Landmark Route Report
 - Telemetry Summary Report.
- **Report Enhancements** - add new graphical formats and improved vehicle status data.
- **New Tamper Proof features** - The WebTech 5000 Locator and Quadrant server support the sending of alerts when the GPS Antenna is disconnected.
- **Landmark enhancements** - including the ability to upload Landmarks, and assign different Landmark icons and Lifespans.
- **Multi-language Support** - Client supports Spanish, Norwegian, French, German Italian, Greek and Chinese.
- **New low-cost Mobile Data Terminal and peripherals** - The MDT2000e supports a new

keyboard and Barcode Reader, and all WebTech MDT applications have been optimized and ported to the new terminal.

Demonstrations will be available at the ATA Management Conference and Exhibit (booth #634), Las Vegas Hilton, Nevada, October 3-7 and at Truxpo (booth #249), Tradex, Abbotsford, British Columbia, October 1-3
